

# The Power of Protection in Retirement Income

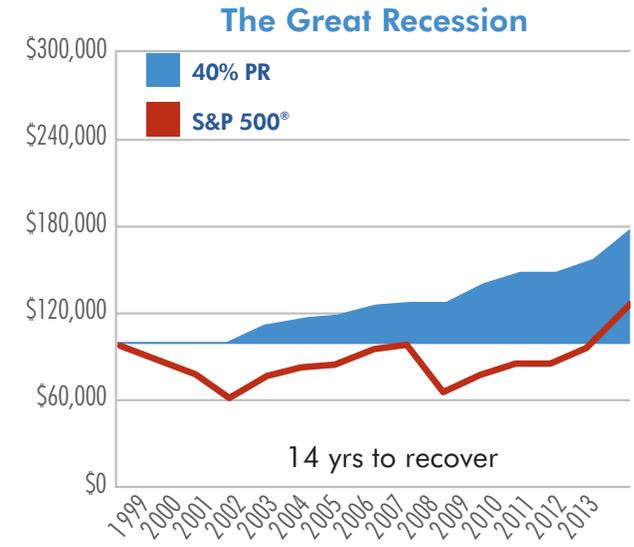

**Historic Examples:** S&P corrections demonstrate the power of protection and value of time saved in recouping from index volatility. A fixed index annuity guarantees principal protection and allows for ongoing growth opportunities through interest credits based on increases in the index. All annual interest credits are locked in and cannot be lost due to index volatility, allowing for bear market protection and guaranteed retirement income.

**Premiums are secure and principal is guaranteed never to be lost due to index volatility.**

**Each year, interest credited to the contract is locked in, so you get the index's new benchmark without the index's recent loss.**

**Without protection, when the S&P 500® experiences a correction, it can take several years to return to the previous value.**

For demonstrative purposes only. Participation rates can change annually. The graph is based on actual rates for the time period shown for the S&P 500® only. Past performance does not guarantee future results. Indexed annuities were not available for the entire period shown, except for 1995-Present. The hypothetical fixed index annuity in this example uses the annual point-to-point index method based on changes in the S&P 500® to calculate the indexed rate for each term. For purposes of these charts an Annual Point to Point 40% Participation Rate is applied for all terms in the period. Assuming \$100,000 initial premium. Indexed interest is credited only on amounts held for the entire term. This example assumes no money is withdrawn from the annuity. Surrender charges will apply if money is withdrawn during the surrender charge period. 1995 is the year fixed index annuities (FIA) products became available. 1996 is the year American Equity Life Insurance Company had an FIA available with the participation rate strategy.
